

Book 2

Interacting with Data Storage

Contents at a Glance

Chapter 1: Manipulating Raw Data

Defining the Data Sources

Considering the Data Forms

Understanding the Need for Data Reliability

Chapter 2: Using Functional Programming Techniques

Defining Functional Programming

Understanding Pure and Impure Languages

Comparing the Functional Paradigm

Using Python for Functional Programming Needs

Understanding How Functional Data Works

Working with Lists and Strings

Employing Pattern Matching

Working with Recursion

Performing Functional Data Manipulation

Chapter 3: Working with Scalars, Vectors, and Matrices

Considering the Data Forms

Defining Data Type through Scalars

Creating Organized Data with Vectors

Creating and Using Matrices

Extending Analysis to Tensors

Using Vectorization Effectively

Selecting and Shaping Data

Working with Trees

Representing Relations in a Graph

Chapter 4: Accessing Data in Files

Understanding Flat File Data Sources

Working with Positional Data Files

[Accessing Data in CSV Files](#)

[Moving On to XML Files](#)

[Considering Other Flat-File Data Sources](#)

[Working with Nontext Data](#)

[Downloading Online Datasets](#)

[Chapter 5: Working with a Relational DBMS](#)

[Considering RDBMS Issues](#)

[Accessing the RDBMS Data](#)

[Creating a Dataset](#)

[Mixing RDBMS Products](#)

[Chapter 6: Working with a NoSQL DMBS](#)

[Considering the Ramifications of Hierarchical Data](#)

[Accessing the Data](#)

[Interacting with Data from NoSQL Databases](#)

[Working with Dictionaries](#)

[Developing Datasets from Hierarchical Data](#)

[Processing Hierarchical Data into Other Forms](#)
