

Book 3

Manipulating Data Using Basic Algorithms

Contents at a Glance

Chapter 1: Working with Linear Regression

Considering the History of Linear Regression

Combining Variables

Manipulating Categorical Variables

Using Linear Regression to Guess Numbers

Learning One Example at a Time

Chapter 2: Moving Forward with Logistic Regression

Considering the History of Logistic Regression

Differentiating between Linear and Logistic Regression

Using Logistic Regression to Guess Classes

Switching to Probabilities

Working through Multiclass Regression

Chapter 3: Predicting Outcomes Using Bayes

Understanding Bayes' Theorem

Using Naïve Bayes for Predictions

Working with Networked Bayes

Considering the Use of Bayesian Linear Regression

Considering the Use of Bayesian Logistic Regression

Chapter 4: Learning with K-Nearest Neighbors

Considering the History of K-Nearest Neighbors

Learning Lazily with K-Nearest Neighbors

Leveraging the Correct k Parameter

Implementing KNN Regression

Implementing KNN Classification
